Transtar Autobody Technologies Announces Addition of Pit-Fill Spot Putty

Brighton, MI – To ensure an ultra smooth surface, use Transtar’s Pit-Fill Spot Putty. It is a single component polymer based system that air dries to a sandable, durable finish in minutes! Designed for use in filling scratches, pinholes, low spots, blemishes, sanding marks and other surface imperfections. Pit-Fill Spot Putty has excellent adhesion to bare metal, galvanized, aluminum and over other properly prepared existing finishes. Once cured, it can be sanded to a featheredge and accepts virtually all paint finishes. It features minimal shrinkage and an ultra-smooth consistency.

Benefits include:

- Excellent adhesion to a wide variety of substrates
- Dries in minutes and is easy to apply
- Ready to sand in half the time of other spot putties
- Superior adhesion and featheredging properties
- Excellent hold-out with minimal shrinkage
- Durable polymer based system
- Easy to close container keeps material clean
- Ergo dynamic package helps reduce waste and is easier to handle than larger tubes

The company has been a trusted name in the autobody aftermarket for over 40 years and continues to offer new, innovative products to the marketplace.

Headquartered in Brighton, Michigan (just 40 minutes outside of Detroit Motor City), Transtar is a leading manufacturer of automotive refinish and body shop repair products that meet the performance standards of its customers and conforms to the regulations that protect the lives of industry professionals and the environment. The company has broad distribution across North America, with a significant presence in Latin America and other key markets. Transtar Autobody Technologies is an ISO 9001:2008 certified manufacturer and part of the Transtar Automotive Group. For more information about Transtar’s products and services, please visit www.tat-co.com.
