## Auto Glass Replacement Tapes

### DESCRIPTION:

Auto Glass Replacement Tapes are sticky “ribbon type” sealers used for the installation of all gasketless windshields and backlights. The tape (also called butyl kits) offer the installer a fast, clean method for installing the glass with instant, powerful adhesion. The sealer has excellent compressibility in both low/high temperatures. Our tapes are designed to maintain position, while avoiding direct contact between the glass and pinchweld.

### USE:

Our tape kits are designed for the replacement of auto glass. The product can be used alone, or in combination with other sealants (for example: urethane), depending upon the type of installation.

### APPLICATION:

After removing the windshield, the pinchweld area is cleaned and primed. The tape kit is hand pressed into place around the pinchweld. When properly positioned, the tape should be continuously attached to the pinchweld. The purpose of the sealer is to provide for a watertight seal. In cold weather conditions it is best to warm the tape kit prior to attempting the installation as this will soften the kit allowing for better workability.

### COMPETITION:

3M WindoWeld Ribbon Sealer

*(Refer to Material Safety Data Sheet for proper handling of products listed in this bulletin).*

### PACKAGE SIZE:

#4536 Auto Glass Replacement Tapes, 5/16” Round x 15’ Roll, 12/case

#4539 Auto Glass Replacement Tapes, 3/8” Round x 15’ Roll, 12/case
