SAFETY DATA SHEET

Section 1 - Chemical Product and Company Information

Product Name: True Finish 2K Acrylic Urethane Primer
Manufacturer/Supplier:
TRANSTAR AUTOBODY TECHNOLOGIES
2040 Heiserman Dr.
Brighton, MI, 48114, USA

Distributor (if applicable):

Product Use: Primer. For Professional and Industrial Use Only.
Not recommended for: Not for sale to the general public.

Section 2 - Hazards Identification

Classification of the substance or mixture

GHS Ratings:

GHS Hazards

- H224  Extremely flammable liquid and vapor
- H340  May cause genetic defects
- H350  May cause cancer
- H360  May damage fertility or the unborn child
- H371  May cause damage to organs
- H373  May cause damage to organs through prolonged or repeated exposure
- H401  Toxic to aquatic life

GHS Precautions

- P101  If medical advice is needed, have product container or label at hand
- P102  Keep out of reach of children
- P103  Read label before use
- P201  Obtain special instructions before use
- P202  Do not handle until all safety precautions have been read and understood
- P210  Keep away from heat, hot surfaces, sparks, open flames and other ignition sources - No smoking

### Section 4 - First Aid Measures

**INHALATION:** If Inhaled: Remove person to fresh air and keep comfortable for breathing. If breathing difficulty persists, seek medical attention.

**EYE CONTACT:** Rinse continuously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing for a minimum of 15 minutes while holding eye lids open. If eye irritation persist: seek medical attention.

</table>
SKIN CONTACT: Take off all contaminated clothing immediately. Wash exposed area thoroughly with soap and water. Seek medical attention if irritation persists. Do NOT use solvents or thinners to wash off.

INGESTION: If swallowed, seek medical attention immediately and have product container or label at hand. DO NOT INDUCE VOMITING unless directed to do so by a physician or poison control center. Never give anything by mouth to an unconscious person.

Most important symptoms and effects, both acute and delayed:
Eye contact: Causes serious eye irritation.
Inhalation: Can cause central nervous system (CNS) depression. May cause drowsiness and dizziness. May cause respiratory irritation. Exposure to decomposition products may cause a health hazard. Serious effects may be delayed following exposure.
Skin contact: Causes skin irritation.
Ingestion: Can cause central nervous system (CNS) depression. May be fatal if swallowed and enters airways. Irritating to mouth, throat and stomach.

Over-exposure signs/symptoms:
Eye contact: Adverse symptoms may include the following:
- Pain or irritation, watering, redness
Inhalation: Adverse symptoms may include the following:
- Respiratory tract irritation, coughing, nausea or vomiting, headache, drowsiness/fatigue, dizziness/vertigo, unconsciousness.
Skin contact: Adverse symptoms may include the following:
- Irritation, redness.
Ingestion: Adverse symptoms may include the following:
- Nausea or vomiting.

Indication of any immediate medical attention and special treatment needed.
Seek professional medical attention for all over-exposures and/or persistent problems.
In case of inhalation of decomposition products in a fire, symptoms may be delayed.
The exposed person may need to be kept under medical surveillance for 48 hours.
Specific treatments: No specific treatment.
Protection of first-aiders: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Section 5 - Fire Fighting Measures
LEL: 1.0 % UEL: 22.7 %

Extinguishing Media: Dry Chemical, Foam, CO2 or water fog.

Unsuitable Extinguishing Media: High volume water jets

Unusual Fire and Explosion Hazards: Vapors can travel to a source of ignition and flash back. Closed containers may explode when exposed to extreme heat. Hazards apply to empty containers. Combustion generates toxic fumes.

Hazardous Combustion Products: oxides of carbon, oxides of nitrogen, formaldehyde, toxic fume

Special Firefighting Procedures: Highly toxic fumes may be generated by thermal decomposition. Water runoff from firefighting can cause environmental damage. Dike and collect water used to fight fire.

Fire Equipment: Full fire fighter equipment including SCBA should be worn to avoid skin contact and inhalation of concentrated vapors. Minimize skin exposure.
Section 6 - Accidental Release Measures

Personal precautions, protective equipment and emergency procedures:
Use personal protective equipment. Avoid breathing vapors and mist. Ensure adequate ventilation. Eliminate all sources of ignition. Evacuate personnel to safe areas. Beware of vapors accumulation to form explosive concentrations. Vapors can accumulate in low areas.
For personal protection see section 8.

Environmental precautions:
Prevent further leakage or spillage if safe to do so. Do not let product enter drains.

Methods and materials for containment and cleaning up:

Small Spills: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Large Spills: Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product.

Section 7 - Handling & Storage

Safe Handling Measures: Avoid contact with skin and eyes. Avoid inhalation of vapor or mist. Ground and bond container and receiving equipment. Use non-sparking tools and explosion proof equipment when handling this material. Keep away from sources of ignition - No Smoking. Use in cool, well-ventilated areas. Keep containers closed when not in use. Take measures to prevent the build up of electrostatic charge. Follow all SDS and label precautions even after container is emptied because they may retain product residues. For precautions see section 2.

General Occupational Hygiene: Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Storage Requirements: Keep container tightly closed. Keep away from heat, sparks, open flames and hot surfaces-No Smoking. Store in a cool, dry and well-ventilated place. Do not reuse container when empty.

**Engineering Controls:** Ground and bond container and reciving equipment. Use explosion proof electrical, ventilation, lighting and motorized equipment. Use non-sparking tools. Ensure adequate ventilation.

**Ventilation:** General mechanical ventilation or local exhaust should be utilized to keep vapor concentrations below exposure limits (PEL & TLV). Ventilation equipment must be explosion proof.

**Safe Work Practices:** Eye washes and safety showers in the workplace are recommended. Avoid contact with skin and eyes. Avoid breathing vapors. Wash hands thoroughly after using and before eating, drinking or smoking.

Employee education and training in the safe use and handling of this product is required under the OSHA Hazard Communication Standard 29CFR1200. Smoking in area where this material is used should be strictly prohibited. Always use protective clothing and equipment. Remove all contaminated clothing and wash thoroughly when finished working. Keep food and drink away from material and from area where material is being used. Spraying of material can cause and oxygen deficient environment. Use proper ventilation to remove vapors, mist and fumes combined with NIOSH approved respirator.

**Respiratory Protection:** When working with this material use a MSHA/NIOSH approved cartridge respirator or suitable respiratory protection to keep airborne mists and vapor concentrations below the PEL & TLV limits. When using in poorly ventilated and confined spaces, use a fresh-air supplying respirator or a self-contained breathing apparatus.

**Eye/Face Protection:** Use safety glasses with chemical splash goggles or faceshield.

**Skin Protection:** Use chemical resistant gloves.
**Body Protection:** Impervious clothing, flame retardant antistatic protective clothing. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

**Contaminated Gear/Hygiene Practices:** Remove all contaminated clothing and wash thoroughly when finished working. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location. Keep food and drink away from materials and from area where material is being used or stored.

### Section 10 - Stability and Reactivity

**Reactivity:** No data available

**Stability:** Stable under recommended storage conditions.

**Possibility of hazardous reactions:** Vapors may form explosive mixture with air. Hazardous polymerization will not occur.

**Conditions to avoid:** Heat, flame and sparks. Extreme temperature and direct sunlight.

**Incompatible with:**

- Strong oxidizers
- Strong Bases
- Strong Acids

**Hazardous products produced under decomposition:**

- Carbon Monoxide, Carbon Dioxide

### Section 11 - Toxicological Information

**Mixture Toxicity**
Oral Toxicity: 4,318mg/kg
Inhalation Toxicity: 134mg/L

Component Toxicity

108-65-6 Propylene glycol monomethyl ether acetate
   Dermal: 5 g/kg (Rabbit)

1330-20-7 Xylene
   Oral: 3,500 mg/kg (Rat) Dermal: 4,350 mg/kg (Rabbit) Inhalation: 29 mg/L (Rat)

66402-68-4 Anhydrous Aluminum Silicate
   Oral: 2,000 mg/kg (Rat) Dermal: 2,500 mg/kg (Rabbit)

100-41-4 Ethylbenzene
   Oral: 3,500 mg/kg (Rat) Inhalation: 17 mg/L (Rat)

8030-30-6 Naphtha
   Oral: 5,000 mg/kg (Rat) Dermal: 3,000 mg/kg (Rabbit)

123-86-4 n-Butyl Acetate
   Inhalation: 29 mg/L (Rat)

This mixture has not been tested for toxicological effects.

Acute Effects:
INHALATION - Dizziness, breathing difficulty, headaches, & loss of coordination.
EYE CONTACT - Moderate irritation, tearing, redness, and blurred vision.
SKIN CONTACT - Moderate irritant. Can dry and defat skin causing cracks, irritation, and dermatitis.
INGESTION - Can cause gastrointestinal irritation, vomiting, nausea, & diarrhea.

Chronic Effects:
May affect liver, kidney and central nervous system with repeated exposure. Prolonged or repeated exposure may cause lung injury.

Effects of Overexposure
Short Term Exposure

The substance irritates the eyes, skin, and respiratory tract. High exposures, above the occupational exposure levels, can cause weakness, headache, and drowsiness and may cause unconsciousness. Contact can irritate the skin. Exposure can irritate the eyes and respiratory tract. Exposure to high concentrations can cause dizziness, lightheadedness, and unconsciousness. Ethyl benzene irritates the eyes, skin, and respiratory tract. Exposure to high concentrations can cause dizziness, lightheadedness and unconsciousness. Very high exposures (above the OEL) can cause difficult breathing, narcosis, coma, and even death. Swallowing the liquid may cause aspiration into the lungs, resulting in chemical pneumonitis. May affect the central nervous system. Concentration of 200 ppm can cause irritation. The naphthas are irritating to the skin conjunctiva, and the mucous membranes of the upper respiratory tract. Skin "chapping" and photosensitivity may develop after repeated contact with the liquid. If confined against skin by clothing, the naphthas may cause skin burn. Exposure can cause dizziness, lightheadedness and unconsciousness. Inhalation: Exposure to vapor can be irritation to the nose and throat. Inhalation of vapor at concentrations above 200 ppm or 3 - 5 minutes can lead to xylene intoxication. Symptoms include headache, dizziness, nausea and vomiting. If exposure should continue, central nervous system depression characterized by shallow breathing and weak pulse can occur. Levels of 230 ppm for 15 minutes may cause lightheadedness without loss of equilibrium. Reversible liver and kidney damage in man has followed exposure to sudden high concentrations of vapor. Such high levels may also give rise to lung congestion. Exposure to extremely high concentrations (10,000 ppm or more) of xylene vapors can lead to a strong narcotic effect with symptoms of slurred speech, stupor fatigue, confusion, unconsciousness, coma, and possible death. Inhalation can cause irritation of the eyes and respiratory tract, causing cough and phlegm. Irritates the skin. Inhalation may cause irritation to respiratory tract. Skin contact may cause irritation. Eye contact may cause irritation.
Long Term Exposure

n-Butyl acetate may cause skin allergy. n-Butyl acetate has been shown to damage the developing fetus in animals. Prolonged and repeated exposure to butyl acetates can cause defatting, drying and cracking of the skin. Although many solvents and petroleum based products cause lung, brain and nerve damage, these chemicals have not been adequately evaluated to determine these effects. Repeated skin exposure can cause dryness and skin cracking. This chemical has not been adequately evaluated to determine whether brain or nerve damage could occur with repeated exposure. However, many solvents and other petroleum-based chemicals have been shown to cause such damage. Effects may include reduced memory and concentration, personality changes (withdrawal, irritability), and fatigue, sleep disturbances, reduced coordination, and/or effects on the nerves to the arms and legs (weakness, "pins and needles"). Repeated or prolonged exposure to the skin may cause drying, scaling and blistering. May cause kidney disease, liver disease, chronic respiratory disease, skin disease, as follows: EB is not nephrotoxic. Concern is expressed because the kidney is the primary route of excretion of EB and its metabolites. EB is not hepatotoxic. Since EB is metabolized by the liver, concern is expressed for these tissues. Exacerbation of pulmonary pathology might occur following exposure to EB. Individuals with impaired pulmonary function might be at risk. EB is a defatting agent and may cause dermatitis following prolonged exposure. Individuals with preexisting skin problems may be more sensitive to EB. There is limited evidence that EB may damage the developing fetus, and may cause mutations. Irritates the eyes and upper respiratory system. Coal tar naphtha may contain benzene, a cancer-causing agent in humans. Exposure may cause nervous system and kidney damage. Some coal tar naphthas contain other substances that can cause blood cell damage. Longer exposure may cause drying and cracking of the skin, and make the skin sunburn more easily. Swallowing the liquid may cause chemical pneumonia. Inhalation of xylene vapor and skin contact with liquid are the two most probable routes of long term exposure. Symptoms of inhalation are dizziness, headache and nausea. Long term exposure has been associated with liver and kidney damage, intestinal tract disturbances and central nervous system depression. Prolonged contact with skin can lead to irritation, dryness and cracking. Repeated exposure can cause poor memory, difficulty in concentration, and other brain effects. It can also cause damage to the eye surface. High exposures may cause lung irritation; bronchitis may develop. Continued exposure may result in emphysema, lung scarring, lung fibrosis, and tumors. A potential occupational carcinogen. Exposure to levels well above 3.5 mg/m3 for several months may result in damage to the skin and nails, temporary or permanent damage to the lungs and breathing passages, and adversely affect the heart. Carbon Black containing PAH greater than 0.1% should be considered a suspect carcinogen. Lungs may be affected by repeated or prolonged exposure at very high concentrations: Some Carbon blacks may contain compounds which are carcinogenic and as organic extracts of these have been classified as possibly carcinogenic to humans, special care should be taken to avoid exposure to such extracts. Lung effects remain controversial and may be due to contaminants. It is probable that minor effects reported are non-specific effects associated with exposure to nuisance dusts in general. Polyaromatic hydrocarbons (PAH) are reportedly present in some carbon blacks. Depending on the process of manufacture, there are variations in their chemical compositions. Prolonged inhalation of concentrations above 5,000 ppm may produce symptoms listed under inhalation and the additional symptoms of headache, dizziness, tremor and fatigue. Additives in denatured alcohol may result in other more severe symptoms. Alcohol has been linked to birth defects in humans. Ethyl alcohol may cause mutations. Repeated exposure (including alcoholic beverages) may cause spontaneous abortions, as well as birth defects and other developmental problems, including "fetal alcohol syndrome." Chronic use of ethanol may cause cirrhosis of the liver.

The following chemicals comprise of at least 0.1% of this mixture and are listed and/or classified as carcinogens or potential carcinogens by the NTP, IARC, OSHA (mandatory listing) or ACGIH (optional listing).

**Section 13 - Disposal Considerations**

Product and container should be disposed of in accordance with all local, regional, national and international regulations. Contact a licensed professional waste disposal service to dispose of this material. Subject to hazardous waste generation, treatment, storage and disposal rules under RCRA, 40CFR261.

**Section 14 - Transportation Information**

The following transportation information is provided based on Transtar Autobody Technologies interpretation of shipping regulations. Each shipper is responsible for identifying, naming, marking and labeling prior to offering for transport.

For inner packagings not exceeding 5L each packaged in a strong outer box: Limited Quantity

**Section 15 - Regulatory Information**

The information listed in this section is not all inclusive of all regulations for this product or the chemical components of this product.

**Australia-AICS:** The following chemicals are listed:

- 64-17-5 Ethyl Alcohol 0.1 to 1.0 %
- 1333-86-4 Carbon Black 0.1 to 1.0 %
- 123-86-4 n-Butyl Acetate 1 to 5 %
- 763-69-9 Ethyl-3-ethoxypropionate 1 to 5 %
- 65997-17-3 Soda lime borosilicate glass 1 to 5 %
- 8030-30-6 Naphtha 1 to 5 %
- 7779-90-0 Zinc phosphate 1 to 5 %
- 100-41-4 Ethylbenzene 1 to 5 %

SDS for: 4951-01
Anhydrous Aluminum Silicate 1 to 5 %
Xylene 5 to 10 %
Acetone 5 to 10 %
Titanium Dioxide (Dust) 5 to 10 %
Talc 5 to 10 %
Propylene glycol monomethyl ether acetate 5 to 10 %
Calcium Carbonate 10 to 20 %

China-SEPA (IECSC): The following chemicals are listed:
Ethyl Alcohol 0.1 to 1.0 %
Carbon Black 0.1 to 1.0 %
n-Butyl Acetate 1 to 5 %
Soda lime borosilicate glass 1 to 5 %
Ethyl-3-ethoxypropionate 1 to 5 %
Naphtha 1 to 5 %
Zinc phosphate 1 to 5 %
Ethylbenzene 1 to 5 %
Anhydrous Aluminum Silicate 1 to 5 %
Xylene 5 to 10 %
Acetone 5 to 10 %
Titanium Dioxide (Dust) 5 to 10 %
Talc 5 to 10 %
Propylene glycol monomethyl ether acetate 5 to 10 %
Calcium Carbonate 10 to 20 %

DSL Status: The following chemicals are listed on the DSL Inventory:
Ethyl Alcohol 0.1 to 1.0 %
Carbon Black 0.1 to 1.0 %
n-Butyl Acetate 1 to 5 %
Ethyl-3-ethoxypropionate 1 to 5 %
Soda lime borosilicate glass 1 to 5 %
Naphtha 1 to 5 %
Zinc phosphate 1 to 5 %
Ethylbenzene 1 to 5 %
Anhydrous Aluminum Silicate 1 to 5 %
Xylene 5 to 10 %
Acetone 5 to 10 %
Titanium Dioxide (Dust) 5 to 10 %
Talc 5 to 10 %
Propylene glycol monomethyl ether acetate 5 to 10 %
Calcium Carbonate 10 to 20 %

HAPS: This formulation contains the following HAPS:
Ethylbenzene 1 to 5 %
Xylene 5 to 10 %

NDSL Status
Calcium Carbonate

NJ RTK: The following chemicals are listed under New Jersey RTK:
Ethyl Alcohol 0.1 to 1.0 %
Carbon Black 0.1 to 1.0 %
n-Butyl Acetate 1 to 5 %
Naphtha 1 to 5 %
Ethylbenzene 1 to 5 %
Xylene 5 to 10 %
Acetone 5 to 10 %
Titanium Dioxide (Dust) 5 to 10 %
Talc 5 to 10 %
California Proposition 65

**WARNING:** This product can expose you to chemicals including
- 108-31-6 Maleic Anhydride 4 PPM
  - which is[are] known to the State of California to cause birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

California Proposition 65

**WARNING:** This product can expose you to chemicals including
- 100-41-4 Ethylbenzene 1 to 5 %
- 13463-67-7 Titanium Dioxide (Dust) 5 to 10 %
  - which is[are] known to the State of California to cause cancer. For more information go to www.P65Warnings.ca.gov.

**PA RTK:** The following chemicals are listed under Pennsylvania RTK:
- 64-17-5 Ethyl Alcohol 0.1 to 1.0 %
- 1333-86-4 Carbon Black 0.1 to 1.0 %
- 123-86-4 n-Butyl Acetate 1 to 5 %
- 8030-30-6 Naphtha 1 to 5 %
- 100-41-4 Ethylbenzene 1 to 5 %
- 1330-20-7 Xylene 5 to 10 %
- 67-64-1 Acetone 5 to 10 %
- 13463-67-7 Titanium Dioxide (Dust) 5 to 10 %
- 14807-96-6 Talc 5 to 10 %
- 1317-65-3 Calcium Carbonate 10 to 20 %

**SARA 312:** This Product contains the following chemicals subject to the reporting requirements of SARA 312:
- 100-41-4 Ethylbenzene 1 to 5 %

**SARA 313:** This Product contains the following chemicals subject to the reporting requirements of SARA 313:
- 100-41-4 Ethylbenzene 1 to 5 %

**TSCA:** The following are not listed under TSCA:
- None
